# NOTE JULY 2007

PDF creation within SAP®

SAP® offers a feature to create PDF files from spool requests that can then be downloaded directly to your computer.
Call the transaction **SA38** and enter the report name **RSTXPDFT4**.
You can either generate the PDF in foreground, or in background.
[For longer lists the background execution is of course to be preferred.]
Enter the no. of the spool request you want to be printed as PDF, and enter the correct PDF name with the corresponding download path.
Then execute the report via *F8*.
The PDF is then downloaded to the file of the selected path.

After the PDF is generated, and downlodad you can display the file with the help of an Adobe Acrobat Reader®.
